

Figure Me Out

Instructions

1. In each empty box, you will write a statement about you that can be answered with a number
2. In each space below the empty box, you will write a number sentence that can be solved to reach the number that matches your statement
EXAMPLE: My house number $\rightarrow 9000/9 \square 3 - 24$
3. The center box is filled out for you; under this box you draw a picture of yourself.
4. Just one rule! Each problem you write must have at least **3** steps.

Example:

Figure Me Out!

Years I've been teaching: $(6+5) \cdot (8+3)$ 11	My birth month: $9 \cdot 2 \div 3$	Number of people in my family: $15 \cdot 5 + 5^2$ 25
Number of U.S. states I've visited: $1 + \frac{12 \cdot 10}{3}$	This is me: 	My shoe size: $\frac{25 + 3 \cdot 25}{10}$
Years married: $2 \cdot (12.5 + 2)$	Number of books I read this summer: $5^2 + 10$ 27	Number of pets I own: $(15 - 9) \div 2$

What do you notice about this problem?

Or this one?
