

Math & Science are  
*literally*  
EVERYWHERE

... a "push your thinking" assignment ...  
This is your chance to get creative!

# Examples:

## Baseball

In baseball, math can be seen everywhere. The dimensions of the field are measured precisely. The pitcher's mound is 60 feet, 6 inches away from the plate and the bases are 90 feet apart. A lot of averages, such as batting average and earned run average, are used to measure a player's success on the field.

## Math

## Science

## Slipping on a Banana Peel

Believe it or not, but slipping on a banana peel can be explained by science. More specifically, your shoe and the ground have roughness so that there is resistance between surfaces -- friction. Bananas reduce the friction between your shoes and the ground so you lose traction.
